JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for fiber crystals growth by micro pulling down method
– – of calcium magnesium vanadium garnet 74
– – of potassium lithium niobate 79
– – of sodium calcium magnesium vanadium garnet 74
– for in situ growth rate measurements
– – by scanning laser micrometry
– – – of mercuric iodide 265
– for phase transformation
– – by pressure relaxation method
– – – of gallium 275
– – – of ice 275
– – – of salol 275
– for miscellaneous purposes
– – of thermal analysis 258

Cellular growth
– theory of average spacing of dendrites 281
Computer simulation
– of average spacing in cellular/dendritic growth 281
– of convection 196
– of radiative reflector influence in vertical Bridgman 296
Convection 145, 196

Defects, characterization
– by X-ray diffractometry 57
– by X-ray of GGG 207
– by X-ray of YAG 207
Dendritic growth
– spacing between cellular/dendritic growth 281
Device characterization
– electronic materials 67
– quantum wells 28
– transistors 28
Diamond 162
Dissolution
– of crystals 275
– of lysozyme crystallites 238

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching 191

Garnet 281

Hydrodynamics, see Convection

Kinetics
– of growth 17, 41, 119, 191, 265
– of interface control 17, 275
– of nucleation 17, 191, 258
– of transformation 248

Lasers, crystals for
– garnets 207
– potassium lithium niobate 74
Lysozyme 238

Melt growth technique
– by Czochralski method
– – of indium phosphide 196
– – of N-methyl urea 135
– – theory of crystal–melt interface shaping 303
– by equilibrium of solidification droplets
– – of lead bismuth nickel alloys 513
– by floating zone method
– – lanthanum borate 226
– by laser heated pedestal
– – of strontium ruthenate 52
– by micro pulling down
– – of potassium lithium niobate 79
– – of sodium calcium magnesium vanadium garnet 74
– by pressure relaxation
– – of eutectic aluminum alloys 541
– – of gallium 275
– – of ice 275
– – of salol 275
– by pulling
– – of nickel-base superalloy rods 140, 145
– – – theory of macro-segregation 145
– by web method
– – of silicon dendrites 41

Nucleation
– of aluminum 258
– of calcium carbonate 125
Numbers
– Grashof 196, 303
– Marangoni 226

– Nusselt 303
– Rayleigh 196

Phase diagram
– of carbon by flame deposition 171

Quantum wells, see Device characterization

Solution growth technique
– by dipping
– – of mercury cadmium telluride 61
– by electrodeposition
– – of zinc 289
– by flux method
– – of aluminum gallium indium arsenide 28
– – of lithium niobate 211
– by gel
– of lithium ammonium sulphate 102
– by low temperature method
– – of epsilon-caprolactam 119
– – of magnesium sulphate hydrate 111
– – of porous materials 111
– – of potassium magnesium sulphate hydrate 111
– – of potassium sodium sulphate hydrate 111
– – of sodium sulphate hydrate 111
– theory of non coherent nucleation 289
Stefan problem or moving boundary problem
– of lanthanum boron 226
Substrates
– patterned
– – for optoelectronics 1

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of barium titanate 67
– – of zinc selenide 185
– by gas source molecular beam epitaxy
– – of gallium arsenide 1
– – of indium gallium arsenide 1
– – of indium phosphide 1
– by liquid phase epitaxy
– – of lithium niobate 217
– by molecular beam epitaxy
– – of alpha-aluminum oxide 95
– – of gallium arsenide 6, 175
– – of gallium selenide 17
– – of indium aluminum arsenide 28
– – of indium gallium arsenide 6, 28
– – of indium phosphide 28
– by Van der Waals method
– – of gallium arsenide 17
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 162, 171
– – – of gallium nitride 181
– – through low pressure chemical vapor deposition
– – – of silicon 191
Transistors, see Device characterization

Vapor growth technique
– by chemical transport
– – of manganese cadmium selenide 167
– by evaporation and condensation
– – of copper gallium disulphide 88
– – of mercuric iodide 265
